Course Overview

Do you have difficulty approaching or reducing long bone fractures? Are you interested in learning simple techniques designed for the general practitioner to repair the most common fractures seen in dogs and cats? This laboratory is the one for you! We will teach reliable techniques and give valuable practical tips useful in repairing simple and more challenging comminuted fractures of long bones.

Participants will have the opportunity to repair fractures using traditional plates, locking plates, pins & tension band, lag screws. Locking plates and screws (also known as internal fixator) simplify treatment of long bone fractures in small animals. The implant system is easy to use, great for the general practitioner and affordable. The internal fixator shares the convenience of the external fixator without the hassles of postoperative management.

About the Instructor

**Dr. Terri Schiller, BSC,
DVM, DACVS CCRT**

Dr. Terri Schiller, BSC, DVM, DACVS CCRT

Dr. Schiller is an Aggie graduate from the University of British Columbia. She received her DVM degree from the Western College of Veterinary Medicine in Saskatoon in 1987. Following graduation she spent 5 years at the North Carolina State University, College of Veterinary Medicine completing a small animal internship, a 3 year surgical residency and a 1 year clinical instructor faculty position. She has been trained in and practices all aspects of orthopaedic, soft tissue, oncologic and neurologic surgical procedures.

On returning to Canada, she and her family settled into the Vancouver area of British Columbia. She was a founding partner of the Canada West Veterinary Specialty Hospital in Vancouver where she offered referral surgical services on a mobile and a fixed basis for 19 years.

During her residency training, Dr. Schiller received extensive experience and expertise in the area of joint replacement and continues to have a keen interest in total hip and knee replacement procedures. She has been a faculty instructor for the Biomedtrix Total hip replacement training workshops since 2003, helping to train many total hip surgeons in North America and Europe. She offers online support and direct consultation and surgical services to multiple referral practices in North America for hip replacement procedures.

Dr. Schiller is certified in canine rehabilitation therapy and has a strong interest in using rehabilitation therapy to help both surgical and nonsurgical patients.

Dr. Schiller has been a part of the specialist team at VCA Canada Western Vet since August 2011. She currently provides part-time clinical service around her other commitments with the Faculty of Veterinary Medicine at the University of Calgary as a Senior Instructor in Small Animal Surgery and Chair of the Professional Skills Program.
