

Revised March 20, 2020

Veterinary Care for your Animals – COVID-19 Information

The Alberta Veterinary Medical Association (ABVMA) would like to address the concern that many Albertans have regarding their family risk with COVID-19 and their animals, both pets and livestock.

Alberta Veterinary Practices – Accessing Veterinary Care during COVID-19

The ABVMA recognizes that veterinary practices provide essential services to maintain the health and welfare of animals in the province. The ABVMA is working to ensure that veterinary services remain available during the COVID-19 pandemic.

Alberta veterinarians and veterinary technologists are committed to providing care in these unprecedented times.

Veterinary practices are taking steps to ensure public health is protected and we are asking for your patience and understanding.

There is a shortage of personal protective equipment (PPE). Veterinary practices may need to postpone elective procedures or implement some changes to how services are delivered.

This may include providing certain consultations by electronic means where appropriate.

Veterinary practices may be reducing hours or appointment availability as staff availability permits.

Veterinary practices may be requesting that you take certain precautions when attending at a veterinary practice and request that you observe Alberta Health Services directions for self-isolation if you have travelled or if you are sick. This will help protect veterinary professionals and staff and ensure continued availability of services.

Our goal is to ensure that non-elective and emergency veterinary medical services are available when needed.

Animals in Canada

According to the Public Health Agency of Canada, there is currently no evidence to suggest that any animal native to Canada (wild, livestock or pets) harbours the virus that causes COVID-19.

It is possible that some types of animals can be infected with COVID-19 but there is no evidence that pets or other animals can spread the virus. There are still many unknowns about COVID-19 and this is an area that remains to be studied and understood.

Livestock

To date, there have not been any reports of livestock being infected by COVID-19 anywhere. However, livestock producers should follow normal biosecurity measures as always. This includes limiting visitors or workers who may have travelled to, or been in contact with, someone from an affected area. For more information regarding on-farm disease prevention, producers are encouraged to consult the:

- [National Biosecurity Standards and Biosecurity Principles](#)
- [National Farm-Level Biosecurity Planning Guide](#)

These recommendations will be updated as more information becomes available.

Information for Pet/Animal Owners

- [COVID-19 FAQs for Public](#) by Alberta Health Services
- [Self-Isolation Information Sheet](#) from alberta.ca/coronavirus

Can COVID-19 be transmitted from humans to dogs and dogs to humans?

On Feb. 28, 2020, a dog in Hong Kong tested positive for COVID-19. It is suspected to be a case of human to animal transmission from infected owner to their own pet. There is currently no evidence that dogs can spread the infection. The dog did not show any clinical signs of illness and the virus was no longer detectable on the tests within five days. Since this one incident, no further dogs have had positive tests for COVID-19. No cases of cats or other domestic animals have been detected with COVID-19.

If you are not ill with COVID-19

You can interact with your pet as you normally would, including walking, feeding and playing. You should continue to practice good hygiene during those interactions (e.g., wash hands before and after interacting with your pet; ensure your pet is kept well-groomed; regularly clean your pet's food and water bowls, bedding material, and toys).

If you are ill with COVID-19, it is recommended that you limit contact with animals until more information is known about the virus. Have another member of your household take care of walking, feeding and playing with your pet. If you have a service animal or you must care for your pet, then wear a facemask. Do not share food, kiss, or hug them, and wash your hands before and after any contact with them.

Are current canine coronavirus vaccines protective against COVID-19?

The canine coronavirus vaccine for dogs is a different strain than the current virus affecting people. No specific vaccine for this strain (COVID-19) is available yet.

Animals in or from other countries

Although the current spread and growth of the COVID-19 outbreak is primarily associated with spread from person to person, experts agree that the virus likely originated from bats and may have passed through an intermediary animal source (currently unknown) in China before being transmitted to humans.

It is recommended that individuals who travel to an affected country or region avoid contact with animals, including wild meat and wet (live animal) markets.

If you are considering travel, check the latest travel health notices for the most up-to-date travel advice prior to travelling.

Animal importation

All animals entering Canada must meet import requirements set out by the Canadian Food Inspection Agency. There are currently no specific requirements in place in Canada restricting animal importation related to the COVID-19 outbreak. Importers, rescue organizations and adoptive families should consider limiting or postponing importing animals.

As always, imported animals should be closely monitored for signs of illness and you should contact a veterinarian if they become sick. Call the veterinary practice ahead to ensure they are aware of the circumstances.

ABVMA OFFICE OPERATIONS

ABVMA office closed March 23 until further notice.

To ensure the health and safety of our staff, and to reduce the risk of the spread of COVID-19, the ABVMA will remain closed until at least April 24, 2020. Please do not attend the ABVMA office in-person until further notice. The ABVMA will continue to monitor the public health risk and will announce when the office will re-open.

Effective Monday, March 23, all association staff will begin working remotely. The ABVMA will strive to continue to provide essential services to the public, members and practices.

Working remotely will result in some reduction in service, however staff are committed to maintaining core services and will respond to voice mails and emails via their email accounts. Responses may be delayed, but every effort will be made to reply to messages in a timely manner.

To contact staff, call 780-489-5007 and use the staff directory to access appropriate staff or visit: <https://www.abvma.ca/site/about/staff?nav=mainsidebar>, About the ABVMA, Staff page to contact staff via email.

Thank you for your patience and understanding and we look forward to serving you during business hours, 8 a.m.-4 p.m., Monday through Friday.
